

## **Abstract**

The present application relates to the field of network technologies, in particular to an address matching-based risk identification method and apparatus, which are used for providing a risk identification solution through address authentication. The address matching-based risk identification method provided by the embodiment of the present application comprises: receiving risk authentication request information, the risk authentication request information comprising identity identification information of a user who requests processing of a service and first address coding information used for identifying a first address; determining stored second address coding information corresponding to the identity identification information and used for identifying a second address; and judging whether the first address is consistent with the second address by matching the first address coding information with the second address coding information, and performing risk identification according to the obtained address matching result.
