Abstract

5

Device for connecting a pipe socket,
a tubular mounting part or a fitting to a pipe

10

The invention relates to a device for connecting a pipe socket, a tubular mounting part or a fitting (3) to a pipe (10), especially a water pipe. The inventive device comprises a connecting part (7). A first end (7a) of said connecting part is to be connected to a pipe (10) by means of a press connection, and a second end (7b) of the connecting part is to be connected to the pipe socket, mounting part or fitting (3).

15

The second end (7b) of the connecting part (7) forms a plug-connection with a receiving part (4) of the pipe socket, the tubular mounting part or the fitting (3). After the press-connection is provided, the connecting part (7) is merely plugged in to connect a pipe (10), for example, to a mounting

20

part.
