

ABSTRACT

A lottery assembly and a packaging device are provided. The lottery assembly includes a lottery portion and a code portion, the lottery portion includes a lottery area, and the code portion is provided with a code area on a side surface thereof. The code portion is separated from the lottery portion, and first information included in the code area is in correspondence with second information included in the lottery area. The packaging device includes a housing and the above lottery assembly, and the housing defines an accommodation space for accommodating a commodity. The lottery portion is located in the accommodation space, and at least part of the code portion is provided outside the housing to expose the code area. The lottery assembly utilizes a lottery to provide an anti-counterfeiting function for the commodity, and does not occupy the external display area of an outer package of the commodity or is not required to change the existing outer package of the commodity.
