

ABSTRACT**METHOD FOR PRODUCING AN ARTIFICIAL WOOD AND ARTIFICIAL
WOOD PRODUCT**

5 The invention relates to a method for produc-
ing an artificial wood product from fibres and bonding
agent and to an artificial wood product comprising fi-
bres and bonding agent. The objective of the invention
is to disclose a new kind of method and a product
10 which allows a production of an artificial wood having
an outer appearance just like a natural wood.

 In the method several fibres are aligned lon-
gitudinally to form a strand wire, several said strand
wires are bonded with said bonding agent unidirection-
15 ally and side by side together to form a fibre sheet,
and several said fibre sheets are stacked and bonded
with said bonding agent one upon the other in layers
to form an elongated wood product in which said sheets
replicate the pattern of annular growth rings of a
20 natural wood.
