(54) **Title:** SYSTEMS AND METHODS FOR INFERRING TRANSACTION BASED ON DATA DETECTED FROM RFID ELEMENTS AT SMART GAME TABLE

FIG. 5A

(57) **Abstract:** In accordance with some embodiments, a game table such as a smart baccarat table may be equipped with one or more detecting components (e.g., an RFID antenna, an NFC antenna or an optical reader) to identify gaming elements placed in a certain area of the smart table that a dealer of the table places gaming elements into when conducting a transaction. A specific type of transaction may be automatically inferred by the game table, without a dealer specifically requesting an initiation of a mode or process for the type of transaction, based on statuses of the gaming elements detected within the area. For example, a Change Transaction may be inferred upon the game table determining that both inventory and non-inventory game elements are present within the area of the table at the same time.
