

ABSTRACT

A method and apparatus for controlling a virtual character, and a terminal and a storage medium, which relate to the technical field of computers. The method comprises: displaying a first virtual-environment picture, wherein the first virtual-environment picture is a picture of a virtual environment that is viewed at a first angle of view of a first virtual character (201); in response to a character state of the first virtual character meeting a preset condition, displaying prompt information, wherein the prompt information is used for indicating that the first virtual character has a capability of carrying another virtual character (202); and in response to the second virtual character being within a preset range of the first virtual character canceling the display of the second virtual character, wherein the position of the second virtual character, the display of which is canceled, changes along with the position of the first virtual character (203).
