(54) Title: SYSTEM AND METHOD FOR REDUCING SOUND TRANSMISSION

(57) Abstract: A sound transmission reduction system for use between a floor (5) or other integer of a building construction and a suitable covering for the floor (5) or other integer includes : i) a rigid single layer substrate (2) of gypsum fibreboard, fibre cement, hardboard, plywood or stabilised reconstituted wood, having a thickness of not more than 14mm; ii) a single resilient layer (3) having a thickness of not more than 10mm secured or securable to one surface (4) of said substrate (2); iii) the resilient layer (3) being secured or securable on its opposite surface (6) to the floor (5) or other integer, such that the arrangement provides a reduction of sound transmission through the floor (5) or other integer. A method of reducing sound transmission is also disclosed.
