Abstract

Lavatory bowl for a WC

The lavatory bowl for a WC has a body (3) made from ceramic or a similar material. A flushing channel (4a) has a connection piece (27) for connection of a flushing water pipe (12). A connection part (10), to which a flushing pipe (12) can be connected, is inserted into a rear recess (9) of the body (3). The connection part (10) has two extension parts (20, 23), which can be cut to length and can be pushed into a flushing pipe end (12a) or onto a pipe connection end (24). The lavatory bowl allows mounting by blind-plug connection.
