(54) Title: SYSTEM AND METHOD FOR SINGLE TRANSPARENT DEPLOYMENT FLOW

(57) Abstract: A system and method for assembling and deploying program units to application servers uses single transparent deployment flow (STDF) architecture (130) to allow users to have a single deployment process deploying to an application server that may be installed across a plurality of platforms or a single platform. The STDF system (130) and method of the present disclosure in one embodiment retrieves information relating to applications (110) deployed, nodes (112), server (114) or container information, and virtual hosts (124) for web applications. The information is present to a user for selection and the selected information is used to create a tool command language script for deploying to one or more desired application servers.
