(54) Title: MULTIPLE INPUT TELEVISION RECEIVER

FIG.1

(57) Abstract: Disclosure is generally directed to a television receiver with multiple inputs, some accepting a local broadcast and some accepting satellite transmissions or transmissions across another network. The television receiver may pass local transmissions through to a display in their original form and at their original frequency, while retuning the display to receive the transmission at its original frequency. The television receiver may also receive, process and provide satellite or other types of programming to the television as necessary. The output of the receiver's modulator may switch back and forth as a user changes between local broadcast and satellite channels. Further, an EPG may be provided that includes information for both programming sources in an integrated fashion.
