

[ABSTRACT]

A position of a user is recognized. A display unit (102) displays a content-display-frame (112). A determination unit (103) determines whether the position of the user is within a predetermined range from a wall surface (12) or not. The display

5 control unit (104) configured to display a content-display-frame on a floor surface (11) when the position of the user is farther than the predetermined range from the wall surface, and configured to display an operation input area (113) that receives an operation input from the user on the wall surface while displaying a content-display-frame to span

10 predetermined range from the wall surface.
