

# KNOWLEDGE GRAPH DATA FUSION

## ABSTRACT OF SPECIFICATION

Implementations of the specification provide a knowledge graph data fusion method and system, and the method includes: obtaining a target entity field and a target  
5 relationship description, the target entity field and the target relationship description being selected from ontology definition data of two or more knowledge graphs; and then, obtaining data instances of related platforms or business fields, and processing the obtained data instances based on a graph operator that is in ontology definition data of a fused knowledge graph and that is used to perform fusion processing on entity fields  
10 and relationship descriptions of different platforms or business fields, to generate the fused knowledge graph.
