(54) Title: METHODS AND ARRANGEMENTS INVOLVING ADAPTIVE AUDITING AND RATING FOR DISPARATE DATA PROCESSING

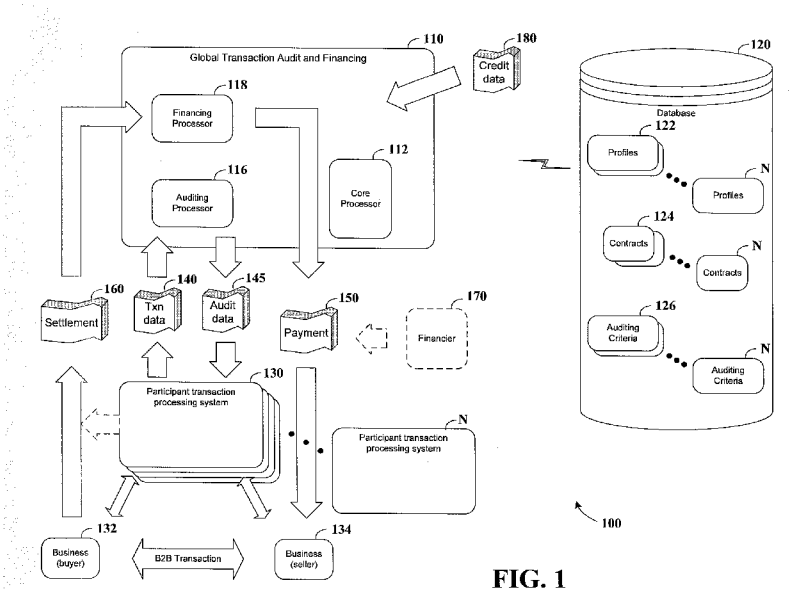

FIG. 1

(57) Abstract: Electronic transactions are audited using a processing system to interact with each of a multitude of entity-specific processor circuits to process transaction data sets. In connection with an example embodiment, a processor circuit communicates with entity- specific processor circuits to receive electronic transaction data sets therefrom, each set of transaction data pertaining to an electronic account. The processor circuit executes processing functions to audit the transaction data set and generate evaluation information for use by the entity-specific processor, respectively using auditing rules defined for the entity-specific processor and evaluation criteria available to the processor circuit.
