(54) Title: FLUID DISPENSER WITH SHUTTLING MIXING CHAMBER

(57) Abstract: The invention relates generally to a foam dispenser having a reservoir (10), a housing (104), and a chamber (107). The reservoir (10) delivers fluid to the housing (104) and the chamber (107) through a dip-tube (106). The chamber (107) moves within the housing in response to fluid pressure or air pressure from the reservoir (10), allowing air and foamable liquid to enter the chamber (107). Foam-producing packing material inside the chamber (107) causes the air and foamable liquid to mix and produce foam.

**Declarations under Rule 4.17:**

- *as to applicant's entitlement to apply for and be granted a patent (Rule 4.17(ii)) for all designations*
- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii)) for all designations*

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
