

CONTAINER FOR PACKAGING PAPER SHEETS, AND PAPER SHEET

PACKAGE BODY

Abstract

Provided is a packaging container for containing stacked sheets of paper, or a
5 paper sheet package body having sheets of paper contained therein. The container or
the box of the paper sheet package body is provided with a paper sheet extraction
opening straddling two adjacent surfaces of the container or of the box, or with a cut for
forming the extraction opening. The extraction opening is provided with: end sections
located at both ends thereof in the boundary direction extending along the boundary
10 between the two surfaces; first and second narrow sections located between both end
sections and narrowed in the direction perpendicular to the boundary direction; and a
protrusion located between the first and second narrow sections and protruding further
toward an end section of either one and/or the other of the two surfaces than both end
sections, the end section being located on the side opposite the boundary.
