

ABSTRACT

The present application belongs to the technical field of computers. Disclosed are an operation control method and apparatus, a device and a computer-readable storage medium. The method comprises: displaying a first game picture, the first game picture comprising a virtual object located in a virtual environment; controlling the virtual object to play a game in the virtual environment; in response to a triggering operation of a backtracking function, displaying a second game picture, the second game picture being a picture obtained after the game state of the virtual object in the virtual environment is traced back to a history state by controlling a game process; and controlling the virtual object to start from the history state and re-play the game. The method makes game operation control modes more diversified, achieving higher flexibility of operation control.
