MEDIUM

ABSTRACT

In a card type recording medium (25) containing a data area (18) where data containing ID information (9) of a holder are recorded, and an image area where image data (19) are recorded, in the image area are recorded second image data which are generated by transforming first image data specifying the holder to frequency-area data (22), adding the transformed frequency-area data with the ID information and inversely transforming the added data to image signals.
