(54) Title: DISPOSABLE MONODOSE INHALER FOR POWDERED MEDICAMENTS

Fig. 4

(57) Abstract: An inhaler for powdered medicaments consists of a substantially smoking pipe- shaped hollow body that has a first portion (1), for housing a cartridge of powdered medicament, and a second portion (2) for delivering the medicament by means of an airstream that carries the powder from an inner drop region (5) along a delivery duct (3) whose end is suitable to be placed in a patient's mouth, the intake of the air being achieved through at least three air intakes (7) arranged symmetrically with respect to the longitudinal midplane of the inhaler, which includes a support base (9, 9') for the cartridge in which oriented flow channels (11) are formed that extend between the three air intakes (7) and the inner powder drop region (5).
