(54) **Title:** WIRELESS VIDEO CAMERA

(57) **Abstract:** A wireless video camera that permits bookmarking of objects in the surrounding environment of the camera. When a remote user selects to see (via streaming video) a previously bookmarked object, the camera determines the appropriate camera viewing parameter to replicate the bookmarked view of the object. To account for an intervening change in position of the camera, the camera may compute any change in position of the camera, and adjust the camera viewing parameters for the bookmarked view to compensate for the camera's updated position so that the original bookmarked view of the object can be replicated. Also, in a streaming video mode where the camera is streaming video to the remote user, the remote user can use a still image from the camera to control the remote camera.
