

**ABSTRACT**

The present invention provides a resin composition for cleaning, which has excellent cleaning performance, can easily be replaced with a succeeding material resin, and is easy to handle. The resin composition for cleaning is a resin composition for cleaning, to be used for cleaning the inside of an extruder or a shaping machine for a resin material. The resin composition for cleaning contains a base material resin and an additive, wherein the additive contains a metal soap and at least one of a fatty acid amide and a mineral oil, provided that when the additive contains the fatty acid amide, the additive has a content of the fatty acid amide of 1.0% by mass or more based on the total mass of the resin composition for cleaning, and the base material resin is a thermoplastic resin having a melt flow rate of 1.0 g/10 min or less, provided that the thermoplastic resin having a content of an inorganic filler of 3 parts by mass or more based on 100 parts by mass of the thermoplastic resin is excluded.
