(54) Title: CANNABIS OIL COMPOSITIONS AND METHODS FOR PREPARATION THEREOF

Figure 1.

(57) Abstract: Provided is a method for preparing a cannabis oil composition, the method comprising the steps of eluting cannabinoids from dried cannabis plant material with a solvent to produce an eluate, filtering the eluate with a series of filters to produce a filtrate, evaporating the solvent by condensing from the filtrate with a distiller to extract the distillate, and purging the distillate via fractional distillation to remove residual solvent, thereby producing a cannabis extract. The method also includes the steps of performing a redox reaction of the cannabis extract for the complete removal of the water for creating CBN (Cannabinol) of various percentages depending on the timeframe in which the redox reaction is performed; and combining the cannabis extract with an essential oil or a carrier oil to produce the cannabis oil composition.
