

ABSTRACT

Provided in embodiments of the present disclosure are a video processing method and apparatus, a device, and a medium. The method includes: receiving a play trigger operation for a forwarded video, the forwarded video being forwarded from an original video by a forwarding user; obtaining the original video, and forwarding comment information provided by the forwarding user on the original video when forwarding the original video; and playing the original video on a play interface of video works of the forwarding user, and displaying the forwarding comment information. In the embodiments of the present disclosure, when the forwarding user forwards the original video, the original video can be played when receiving a play operation for the forwarded video, and meanwhile, the forwarding comment information provided by the forwarding user on the original video during the forwarding is displayed while playing the original video, instead of only displaying the comment information of the creator as in the related art. Thus, in this case, it is convenient for the user to know the forwarding user's feeling about the forwarded video, thereby improving the user's sense of experience.
