(54) Title: METHOD OF MULTIPLEXING OVER AN ERROR-PRONE WIRELESS BROADCAST CHANNEL

(57) Abstract: Provided is a method and system for transmitting information. The method includes determining stream length information for at least one data stream to be transmitted and associating the stream length information with a system parameter message. The system parameter message including the associated stream length information is transmitted separately from the data stream. This process facilitates de-multiplexing of individual streams and the processing of stream data even if one or more individual streams are received in error.
