(54) Title: DEVICE FOR MOVING AN ARTICLE

FIG. 1b

(57) Abstract: A device for moving an article (10) between a first position and a second position, the device comprising: a support portion (12) for supporting an article (10); one or more wheels (22, 30); and at least one actuator mechanism (18) coupled to the support portion (12) and the one or more wheels (22, 30). The at least one actuator mechanism (18) is configured to move the support portion (12) between a first position and a second position, wherein the first position is offset from the second position such that the support portion (12) is raised relative to the one or more wheels (22, 30) when moved from the first position to the second position to allow at least a portion of the one or more wheels (22, 30) to protrude beyond a plane defined by the support portion (12).
