(54) Title: PIZZA PRODUCT, PACKAGING FOR A PIZZA PRODUCT, AND METHOD OF COOKING AND DISTRIBUTION FOR A PIZZA PRODUCT

Figure 5 – Side Embodiment of Packaging

(57) Abstract: This invention relates to a pizza product that is prepared separately utilizing two types of doughs that are combined after heating. The doughs have different characteristics and are heated in combination with different ingredients. The heating process for both doughs is performed under different humidity conditions and may be performed simply with a conventional microwave oven. The present invention also includes an apparatus and method for the preparation of such pizzas, as well as an innovative delivery process, which allows delivery of the pizzas from a central delivery station — without the need of having one or more processing locations (e.g., a chain of physical stores) to prepare and/or cook the pizza product.
