

Abstract

The present invention disclosed a ginseng fresh-keeping method, including preparation for production and ginseng selection. In addition, this method is characteristically comprises the processes of packing, refrigerating, defrosting and sorting. The present method with process of filler protection – refrigeration – recover by thawing had discarded the defects of the traditional methods for ginseng preservation, and is obviously environmental, advanced and novel in practice. The present method has solved the technical problems that had hindered the development of preserved ginseng products for long. The gate for export is widely opened and a solid foundation for expensive application of preserved ginsengs is thus laid. Undoubtedly the application of the present invention would greatly improve the development of ginseng industry and bring new and fashionable energy to the honorable, mysterious and magical ginsengs.
