

CIRCULAR KNITTING MACHINE WITH A ROTATABLY DISPOSED DIAL**Abstract**

A circular knitting machine is described with a frame (1), a rotatably disposed dial (16), a dial cam support (8) for a dial cam (18) mounted in the frame (1) and a dial cam shaft (11), which is disposed rotatably and coaxially in the dial cam support (8) and is intended for driving the dial (16). According to the invention, the dial (16) is disposed rotatably and coaxially on the
5 dial cam support (8) with adjustable bearing clearance and is preferably connected coaxially to the dial cam shaft (11) by means of a spring plate (20).
