

METHOD OF FORMING A COMBINED FOOD PRODUCT CONTAINING GRANULATED OBJECTS

Abstract

A forming method of forming a combined food product containing granulated
5 objects and a food dough comprising steps of (a) discharging a tubular food
dough from a discharging device and forming a bottom of the tubular food
dough; (b) supplying a predetermined amount of granulated objects to an
inside of the tubular food dough formed with the bottom; and (c) cutting the
10 tubular food dough to divide the combined food product filled with the
supplied granulated objects. In the step (c), the combined food product is
formed so that an upper surface of the granulated objects which are filled is
partially and ununiformly covered with the food dough.
