

ABSTRACT

Embodiments of the present disclosure disclose a page processing method, an apparatus, a device, and a storage medium. The method comprises: displaying a first personal homepage of a first user in a preset application program, wherein a currently logged in identity of the preset application program is consistent with the first user, and the first personal homepage comprises a first presentation area and a second presentation area; displaying in a first sub-area of the first presentation area the user identifier of the first user, displaying in a second sub-area of the first presentation area an entry of a first function in a first function set, displaying in the second presentation area information associated with multimedia content published by the first user and displaying an entry of a second function in a second function set, wherein the second sub-area is invisible to a second user when the second user accesses the first personal homepage.
