(54) Title: **METHOD FOR ACTIVATING INTELLIGENT NETWORK SERVICES IN A MOBILE COMMUNICATION SYSTEM, AND A MOBILE COMMUNICATION SYSTEM**

(57) Abstract

The invention relates to a mobile communication network and a method for activating intelligent network services in the mobile communication network. In the invention, the mobile services switching center (MSC) operates as the service switching point of the intelligent network. The mobile services switching center stores the service triggers, which service triggers comprise the triggering criteria for the services and the information required for visiting the service control point (SCP). The mobile subscriber's subscriber data in the subscriber database (HLR) is provided with an intelligent network service trigger key which points to one or more service triggers. As the mobile services switching center obtains the trigger key of the mobile subscriber during the call setup, it activates the service triggers indicated by the key. As the triggering criteria of the service trigger are met at some phase of the call, the mobile services switching center triggers the respective intelligent network service in the service control point (SCP) indicated by the service trigger.
