ABSTRACT

VEHICLE MANAGING DEVICE

A vehicle managing device is provided with a control station of a vehicle use shared system in which a user ID number is compared with an ID number registered on an ID terminal owned by the user. The vehicle managing device includes a reservation information storage unit which stores vehicle reservation information of the user so as to relate to the user ID number; a vehicle reservation confirmation unit which confirms a presence of a reservation made by the user on a vehicle the user wishes to use by retrieving the reservation information storage unit using the user ID number transmitted from the vehicle; and a vehicle rental control unit which, if it is determined that the user has made a reservation on another vehicle, cancels the reservation made by the user and instructs rental permission to the vehicle the user wishes to use.
