FVIII PEPTIDES FOR IMMUNE TOLERANCE INDUCTION AND IMMUNODIAGNOSTICS

Abstract

The present invention is related to peptides that can be used to reduce the immune response against FVIII or to induce tolerance to human FVIII in patients with, e.g., hemophilia A. Furthermore, the peptides can be used for immunodiagnostic purposes to detect FVIII-specific $CD4^+$ T cells to monitor patients with hemophilia A during replacement therapy and during immune tolerance induction therapy.
