(54) Title: BLISTER PACKAGING AND KIT THEREWITH

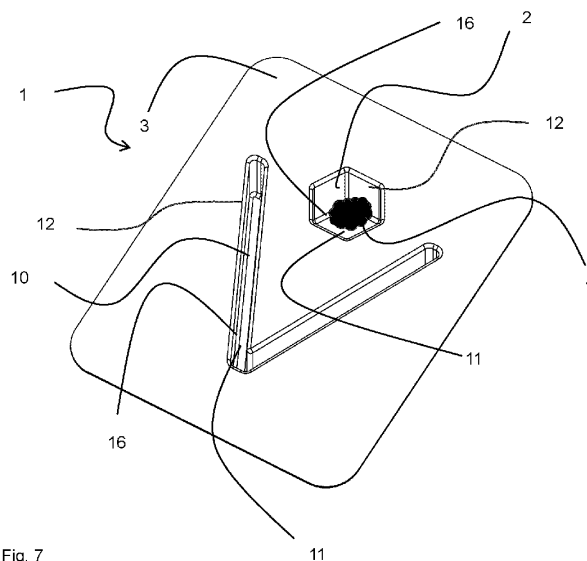

Fig. 7

(57) **Abstract:** The present invention relates to an improved blister packaging (1) for active agents, e.g., peptides that need to be dissolved before application, for example, self-assembling peptides such as P11-4. In particular, the present invention provides a blister packaging (1) that can be both conveniently used and more cheaply produced than previous packaging, as well as use thereof in application of the peptide, e.g., in treatment of subsurface caries lesions. In one preferred embodiment, the blister packaging (1) comprises a blister sheet with at least one first cavity (2), a cover sheet (3) laid over and bonded to the blister sheet, wherein the at least one first cavity (2) comprises a porous support (4) coated with an active agent, and, advantageously, a stabilizing cavity (10) reducing wobbling of the blister packaging (1) during the process of dissolving the active agent, preferably, a V-shaped stabilizing cavity (10).
