(54) Title: METHOD AND DEVICE FOR RECORDING INFORMATION ON A CARRIER

(57) Abstract

A method of digitally recording information on a suitable medium, particularly a CD is described, in which method a recording (11) is made during a recording session. The recording (11) comprises a program portion (20) with the information to be recorded. Prior to recording the program portion (20), a predetermined number of run-in blocks (21, 22, 23, 24) is recorded, and subsequent to recording the program portion (20), a predetermined number of run-out blocks (25, 26) is recorded. During the recording session, an identification code (RID) identifying the recording apparatus used for the relevant recording session is recorded on the medium. In accordance with the present invention, this identification code (RID) is recorded in at least one of said run-in blocks (21, 22, 23, 24) and run-out blocks (25, 26). This provides the possibility of recording a full identification code, even in the case of relatively short recordings.
