

METHOD AND SYSTEM FOR RENDERING HYPER-LINK INFORMATION IN A PRINTABLE MEDIUM FROM A GRAPHICAL USER INTERFACE

ABSTRACT

A method and system for rendering in a printable medium (128) hyper-link information contained in a document (132) displayed within a graphical user interface within a data processing system linked to other data processing systems in a data processing network. A document (132) constructed from data generated at a data processing network server is selected and displayed within a graphical user interface. Thereafter, in response to the selection of the document (132), if the document includes hyper-link information (134), a reference object is generated. Next, the reference object (130) is associated with the hyper-link information (134). Thereafter, in response to a user input, the document is automatically printed in a printable medium (128), in association with the reference object (130), such that the hyper-link information (134) is automatically presented in association with the printed document (128).
