Cleanroom-suitable Line Protection Guide for ESD Protected Areas**Abstract**

10

The invention relates to a line protection guide (1) for lines (3), such as for example cables, hoses or the like, in particular for cleanroom applications, having an elongate, flexible envelope (8) which is displaceable to-and-fro, the envelope (8) comprising at least one envelope unit (101; 301) which has at least one tubular receptacle (102) for guiding at least one line (3), the respective receptacle (102) extending duct-like in a longitudinal direction (L) from a first end to a second end.

15

According to the invention, the line protection guide (1) is configured to dissipate electrostatic charges over at least one part of its longitudinal extent, so as to enable use of the line protection guide in ESD protected areas, the at least one envelope unit (101) comprising a conductive or dissipative material.
