

## ABSTRACT

~~Provided are a method and apparatus for selecting a destination address in a sidelink, and a storage medium. The~~A method for selecting a destination address in a sidelink is applied~~to performed by a terminal and comprises~~includes: determining a discontinuous reception (DRX) parameter and a DRX state of a destination address corresponding to a logical channel (S11), wherein in which data to be transmitted is configured to transmit on the logical channel is a logical channel having data to be sent; and selecting, on the basis of the DRX parameters, the DRX state and the a logical channel priority of the logical channel, the a destination address for sending configured to transmit the data to be sent (S12) transmitted. By means of the method,~~data delay and loss can be avoided.~~
