(54) Title: NATURAL SOLUTION LANGUAGE

Drawing 47

(57) **Abstract:** A computer-implemented method that effectively replaces 'programming code' in conveying application or solution logic to the computer using a natural language-based design. Without taking any reference to alien symbols or keywords, NSL uses standard and familiar natural-language-like constructs (any natural language, not just English) using a computer-implemented method to technically convey complex operating, application, and solution logic to the machine agents (computers) in a user-friendly way. Using the same computer-implemented methodologies, it has the power to translate or reverse engineer all existing programming code into NSL. Fundamentally, NSL requires no 'programming code' expertise. Users can quickly and easily convey the logic directly to the computer or recruit available solution components with ease. In addition, the elimination of artificial barriers between information and processes, and merging them, solution logic embedded in computer programs and applications is brought into the purview of
