(54) Title: A SYSTEM FOR REMOTELY CONTROLLING CLIENT RECORDING AND STORAGE BEHAVIOR

(57) Abstract: A system for remotely controlling client recording and storage behavior schedules the recording, storing, and deleting of multimedia content on a client system storage device. The invention provides objects called a capture requests that are sent by the service to client systems. Capture requests reflect local storage management decisions about how the client system storage is partitioned. Capture requests also allow the service to determine content to be recorded by the client system in the same manner that a viewer requests that certain content are recorded but are more powerful than what a viewer can request. Capture requests can adjust all aspects of a recording request and affect the capture request itself.
