(54) Title: PERSONAL DEVICE FASTENING SYSTEM

(57) Abstract: The invention relates to a clip (300) for capturing at least one capture member (401) within a capture zone (311). A gate (320) blocks an opening (310a) of the capture zone to thereby capture the capture member(s). The clip may be attached to a person by way of an attachment member (350), such as an attachment hook. A personal device such as a mobile phone (10) may be secured to the clip via a capture member locatable within the capture zone. Accordingly, the personal device is attachable to the person via the clip when worn by the person. The invention also relates to a clasp (500) that is capable of capturing a detention member (403) within a detention zone (530).
