In English translation (filed in Swedish). RTMP 54 9611470-7
(54) Title: LIGHTNING DEVICE (57) Abstract The present invention is for a lightning device by which a controlled light pattern is obtained from a specific light source. The device comprises a light source which emits several parallel light beams. There is one prism (3) for each light beam (8), which passes through there. All of the prisms are integrated parts of a common disc. Preferably the light source comprises several light emitting diodes (1) each emitting one light beam. The prisms are suitably made as straight, circular cylinders, at least those parts thereof which protrude from the common disc. The oblique surface may be freely varied at both its angles at the axis of the cylinder and direction whereby the direction of the corresponding light beam may be controlled.
