## Abstract

\*G00002\*

An application title, storage location information, and a download flag F is stored in an application control table TBL provided in table area 14b of  
5 EEPROM 14 of mobile phone MS. The download flag F indicates whether the application is a downloaded application. When downloading an application from IP server W, CPU 11 changes the download flag corresponding to the application to "1". When executing the application, CPU 11 reads out the download flag F corresponding to the application and  
10 displays a predetermined image on a liquid crystal display MS4 when the download flag F has a value of "1".
