

**Title of Invention: Method and System for Recommending a Lift
for Accessing a Unit at a Location**

Abstract

5

The present disclosure provides methods and systems for recommending a lift for
accessing a unit at a location. In some examples, there is provided a method comprising:
identifying, by a processor, location information from a database that corresponds with
10 location information of a unit at a location indicated in a request; identifying, by the
processor, a lift from the database that has been used to access a unit associated with
the identified location information; and recommending, by the processor, a lift for
accessing the unit at the location based on the identified lift.
