(54) **Title:** SERVICE ADDRESSING IN DISTRIBUTED ENVIRONMENT

FIG. 1

(57) **Abstract:** An example service addressing method in a distributed environment includes: generating a service querying request, the service querying request including a querying condition; acquiring a first server address list of a target service corresponding to the querying condition; acquiring a failed server address list; deleting the failed server address list from the first server address list to obtain a second server address list; selecting a target server address from the second server address list; and initiating an invocation of the target service to the target server address. The techniques of the present disclosure improve the efficiency of the service invocation.
