ABSTRACT

A base station includes a base station body, a mop member cleaning device disposed on the base station body, a cleaning fluid supply device and a dirty fluid collection device. The mop member cleaning device is configured to clean a mop member of the cleaning robot. The cleaning fluid supply device and the dirty fluid collection device are configured, thus the dirty cleaning fluid can be timely replaced, which avoids a secondary pollution to the mop member, and finally guarantees the cleaning effect. Furthermore, the cleaning robot system is capable of automatically cleaning the mop member with no need for users to change or clean the mop member frequently, which is helpful to free consumers from house cleaning, thus relieving the burden on the consumers, and also helpful to clean the mop member in time so as to ensure a better effect in next cleaning.
