

ABSTRACT

The present invention relates to a detergent containing or prepared by blending: (A) an anionic surfactant; (B) an aminopolyether-modified silicone containing a polyoxyalkylene structure and satisfying the following formula (I); and (C) an organic acid, wherein a mass ratio [(A)/(B)] of the component (A) to the component (B) is 25 or more, and a mass ratio [(A)/(C)] of the component (A) to the component (C) is 1 or more and 3,000 or less:

$$0.01 \leq \text{Si/AO} \leq 1.6 \quad (\text{I})$$

(in the formula (I), Si represents a molar number of a silicon atom in the component (B), and AO represents an oxyalkylene average addition molar number in the component (B)).
