

POWER MANAGEMENT FOR DIGITAL DEVICES

ABSTRACT

5 A method according to one embodiment includes coupling at least one power
supply to a power bus comprised in a digital camera. The method of this embodiment
may also include allocating power to at least one component of the digital camera by
coupling at least one component to the power bus based on at least one power
management priority rule. Of course, many alternatives, variations, and modifications
10 are possible without departing from this embodiment.
