G00002

which the central body is furnished with an electric switch (19) for turning the vibrator generator on and off as needed, said switch being either on top or consisting of a rotating lid on said body.

5. Massage vibrator according to the previous claims, in which the vibration generator is an electromagnetic unit or an electrically-driven cam.

6. A method for stimulating points on the surface of a body with a vibratory massage action produced by a vibration generator housed in a container which can be handled and operated directly by a user, wherein active terminal heads (15) at free ends of at least one pair of springy arms (14) attached to and transmitting the vibrations from the container, are applied to the points.
