(54) **Title:** INSTALLING SOFTWARE REMOTELY USING A HIGH PRIVILEGE PROCESS

Fig. 6

(57) **Abstract:** Software that would not normally be able to be installed on a machine through a remote process is installed by a high privilege installer running on the machine. A request is received from a remote machine to install software on the machine using the high privilege installer. The high privilege installer determines when software that was requested remotely is to be installed. For example, the high privilege installer may monitor an install queue for software to be installed. When there are entries in the install queue, the high privilege installer is used to install the software. When there are no entries in the install queue, the high privilege installer may sleep until there is more software that is identified to be installed.
