

Mp. No 99/673

7 September 1999

Electrical installation unitAbstract

The invention proposes an electrical installation unit having a functional insert (3), a central cover (1) and a frame (6), where mounting the central cover (1) on the functional unit (3) results in the interposed frame (6) being mounted. The functional insert (3) is provided with at least two opposite undercuts (4) and the central cover (1) is provided with at least two latching hooks (2) corresponding to said undercuts, the result being a releasable latch connection between the functional insert (3) and the central cover (1). The central cover (1) has at least two mutually opposite spring elements (5) which press against the frame (6).
